The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #30 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid of light chains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example 2; Page 10; 37pp; English

The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #15 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       heavy cha

The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #18 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid

The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #19 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 130 AA;

The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #13 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally dev

                                                                                                                                                                                                                                                                                                                        Ś
                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                          á
                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a method for modifying a plant to produce an antibody or an active fragment or derivative, or a protein functional equivalent, in a cellular compartment comprises introducing a CC DNA sequence encoding a heavy chain immunoglobulin, where the DNA is compartment. The method is used for producing a heavy chain immunoglobulin to a cellular compartment. The method is used for producing a heavy chain immunoglobulin to a cellular compartment. The method is used for producing a heavy chain that is functionally equivalent for increasing the pathogen resistance in a plant or to modulate metabolism in a plant. Under some circumstances it may be desirable to retain the antibody product with the plant rather than cextracting and isolating the product. In particular, edible selected antigens may be used in a method of passively immunising an animal, preferably human, against the antigen, e.g., pathogenic organisms. The preferably human, against the antigen, e.g., pathogenic organisms. The present sequence is an anti-portato SBEII antibody (denoted Clone46) heavy chain variable domain (VH) attached to peptide linkers, myc and his6 tag.

The potato SBEII is a starch branching enzyme also designated SBE A
                                                                                                                                                                                                                                                                                                                                                           Query Match

The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #9 from

The invention describes a protein array (1) comprising a number of heavy-
C chain variable domain antibodies or antibody fragments, obtainable from
C camelidae. The method is useful for removing abundant proteins from an
C extract or sample which do not provide useful information on the
C condition of a cell or tissue in the extract or sample to be
investigated. (1) is useful for detecting the presence of individual
C proteins in a sample, comparing the distribution of proteins in different
C cell types, and identification of proteins that may be of importance in
C cell types, and identification of proteins that may be of importance in
C cell types, and leavy-chain variable domain derived from an
C immunoglobulin that is naturally devoid of light chains (VHH) in (1)
C provides a number of advantages, such as an improvement of
C sensitivity/resolution in the order of 10-100 times, and detection of
C post-translationally modified proteins. The invention also describes a
C method (II) that enables the simultaneous processing of large numbers of
C target antigens in a controlled way. The incorporated phage-ELISA
C generates on-line information of the technology, based on computer-made
C allows the complete automation of the technology, based on computer-made
C decisions on the values of the phage-ELISA for continuation of a limited
C conditions can be tested, varying amounts of imput-phages can be used
C simultaneously in order to decrease the enrichment of sticky phage-
C antibodies. Micro-panning is an effective tool for selecting both naive,
Synthetic and immune libraries on large panels of antibodies in short
C time frames needed for the generation of large panels of antibodies in short
C time frames needed for the generation of arrays (proteomics). This
C antibody (VHH)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ş
                                                                                                 The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (MIL)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Llama antibody; camelid; anorectic; heavy chain variable domain; VHH; human dietary enzyme inhibitor; medicament; human pancreatic lipase; HPL; food; human gastric lipase; HGL; cosmetic control; body weight.

A

present peptide sequence na (camelid) species

is HGL

inhibiting

된

fragment,

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #22 from

                              The present invention relates to a method for modifying a plant to produce an antibody or an active fragment or derivative, or a protein functional equivalent, in a cellular compartment comprises introducing DNA sequence encoding a heavy chain immunoglobulin, where the DNA is linked to promoters and provided with an additional sequence encoding peptide capable of targeting heavy chain immunoglobulin to a cellular compartment. The method is used for producing a heavy chain immunoglobulin or an active fragment or derivative, or a protein that if functionally equivalent for increasing the pathogen resistance in a place or to modulate metabolism in a plant. Under some circumstances it may increasing the pathogen resistance it may increasing the pathogen resistance in a place of the pathogen resistance.
   or to modulate metabolism in a plant. Under some circumstances it may desirable to retain the antibody product with the plant rather than
                                                                                                                                                                                                                                                                                                                                                                                                                  Modifying a plant to produce an antibody useful for increasing pathogen resistance or to modulate metabolism comprises introducing a DNA sequence encoding a heavy chain immunoglobulin linked to a peptide that targets a cellular compartment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Potato; heavy chain immunoglobulin; pathogen resistance; metabolism modulator; passive immunisation; heavy chain VH; anti-potato SBEII; starch branching enzyme; SBE A.

                       New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid of light chains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              extracting and isolating the product. In particular, edible selected antigens may be used in a method of passively immunising an animal, preferably human, against the antigen, e.g., pathogenic organisms. The present sequence is an anti-potato SBEII antibody (denoted Clome68) heavy chain variable domain (VH) attached to peptide linkers, myc and his6 tag. The potato SBEII is a starch branching enzyme also designated SBE A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Llama antibody; camelid; anorectic; heavy chain variable domain; VHH; human dietary enzyme inhibitor; medicament; human pancreatic lipase; food; human gastric lipase; HGL; cosmetic control; body weight.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                10-DEC-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #4 from lama (camelid) species
                                                                                 (UNIL )
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 129

The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HFL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #16 from llama (camelid) species

Torano A., Putnam F.W.;
"Complete amino acid sequence of the alpha 2 heavy cha
IgA2 immunoglobulin of the A2m (2) allotype.";
Proc. Natl. Acad. Sci. U.S.A. 75:966-969(1978).
-I- MISCELLANEOUS: THE SEQUENCE OF THE ALPHA-2, A2M(2)
REGION OF THIS WYELOWA PROTEIN IS ALSO GIVEN.
-I- SIMILARITY: Contains 1 immunoglobulin-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                315.5
